DETAILED ACTION

Allowable Subject Matter

Claims 2-7, 9-17, 19-31, and 39-46 are allowed.

EXAMINERS REASON FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The prior does not anticipate nor render obvious the combination set forth in the independent claims, and specifically does not show a compressor receiving fluid from a low-pressure side of a circuit and outputting fluid to a high-pressure side of the circuit, with processing circuitry receiving fluid property and current information from the one high-side sensor and comparing the fluid property and current information to the other of the said fluid property and current information to determine a system operating condition. Kauffman et al. teach a compressor with processing circuitry 38 receiving motor current 50, high side temperature 48 and pressure 46 and low side temperature 40 and pressure 42 in order to determine system operating conditions and communicate 104 with an intelligent device. Kauffman et al. however fail to teach the high-side sensor and at least one current sensor compare fluid property and current information to the other of said fluid property and current information to determine a system operating condition. There is sufficient evidence in the specification that new matter is not included in the amendment of the originally filed claims. Specifically the specification provides a relationship between current drawn by the compressor and a discharge pressure of the compressor to differentiate between

voltage supplied to the compressor and a permanent compressor fault, see page 26 paragraph 62 of the specification.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
